We recommend that even the fall pair dams confirmed pregnant by ultrasound be turned in with bulls as they are short bred when confirmed safe in calf. Females not far enough along to pregnancy check (not confirmed) should definitely be turned in with a bull as their AI service may not have resulted in a pregnancy.

Pathfinder - The Pathfinder Angus program was started in 1978 to identify superior cows in the breed based on their records of performance from Angus Herd Improvement Records. In identifying these superior cows, emphasis was placed on early puberty, breeding and early calving, followed by regularity of calving and above average performance of the offspring. The Pathfinder report requires a minimum of three calves from a cow to determine her regularity of calving and ability to produce superior calves for weaning weight year after year.
